

CELLPHONE3G PROTOTYPING MODULE VERSION 1.3 8/8/2014

This board is heavily based on David Mellis' 2G Cellphone Module, with permission.

It was modified by Jenner Hanni in 2014 to be 3G-capable using the Quectel UC15.

It is open hardware released under the MIT License.

It is a draft release and has not been built. There is no warranty. Use it at your own risk.

Contact Jenner at <jeh.wicker@gmail.com> for more information

ATMEGA1284 MICROCONTROLLER

VBAT MAX IS 4.2V BUT
IT DISCHARGES OVER TIME

DO NOT ATTACH ISP, FTDI,
OR USB AT THE SAME TIME.
